

HepatoPredict

Prognostic tool for Hepatocellular Carcinoma

Predicts the likelihood of **disease recurrence** in patients with Hepatocellular Carcinoma

Why use HepatoPredict?

Improve patient selection for liver transplantation

Equity in organ allocation

Optimize patient management after liver transplantation

More years of life with better quality

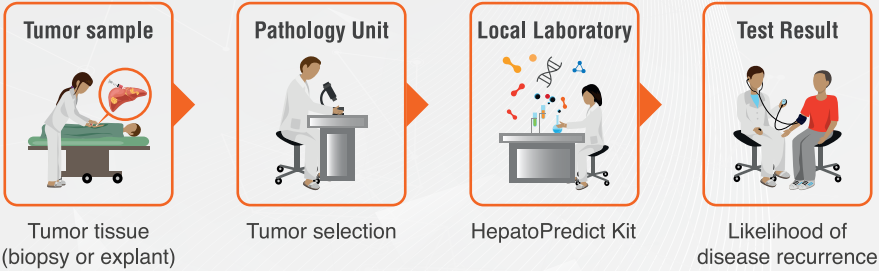

Improved patient stratification for surveillance and treatments

Personalized medicine

One kit provides **all the reagents** needed to run one patient sample from RNA isolation to gene expression signature evaluation by RT-PCR

HepatoPredict shows overall better performance

More patients included for liver transplantation, achieving lower recurrence rates comparing to the currently used criteria (14%), with long term follow-up (16 years)
